

The ultimate solutions for reliable cotton crop protection.

Protect your cotton while fighting insecticide and herbicide resistance with these ADAMA solutions.

Diamond[®] Insecticide

Diamond Insecticide

Controls a broad spectrum of damaging pests including caterpillars, plant bugs, stink bugs, fleahoppers, grasshoppers, midges and more.

Soft on beneficials.

Insect Growth Regulator (IGR)

Controls 1st and 2nd instar larva and breaks the lifecycle by reducing egg laying and egg viability. Stops damage before it starts!

Longer Residual

Longer than other products – up to 21 days.

Increased Yield Potential

Field trials have shown up to 359 lbs of additional lint produced.*

Stop Crop Damage

Early application for immediate protection, followed by 1-2 additional sprays to keep insects in check.

Cotoran Herbicide

Offers the broadest spectrum of weed control, including herbicide-resistant Palmer amaranth (pigweed), morningglory and marestail.

Provides the optimal combination of crop safety and efficacy among cotton preplant and preemergence broadleaf herbicides.

Cotoran[®] Herbicide

Long-lasting Residual

Up to three weeks of control for broadleaf weeds and grass suppression.

Flexible Control

An integral part of all weed control programs including Roundup Ready[®], LibertyLink[®], Roundup Ready[®] Xtend and Enlist[™].

Start Clean

Get cotton off to a clean start with pre-emergence application.

Two Sites of Action

Break the cycle of herbicide resistance in annual grasses and broadleaf weeds.
