Correct mixing order

Step 1	Add approx. 80% of the water	
Step 2	Add any WG/WP formulations (e.g. Champ®, Kocide® Opti) allowing to disperse between products	
Step 3	Add any SC products (e.g. Venturi® MAX, Custodia® Forte)	
Step 4	Disperse	
Step 5	Add any DC products (e.g. Trivor®)	
Step 6	Disperse	
Step 7	Add any SE, EC or EW products (e.g. Lascar®)	
Step 8	Disperse	
Step 9	Fill with more water	
Step 10	Add any SL products (e.g. Axiom® Flexi)	
Step 11	Disperse	
Step 12	Add any SL glyphosate or paraquat products (e.g. Spraytop®)	
Step 13	Add any wetters or oils	
Step 14	Top up with water and disperse	

Always read and follow the product label directions of all tank-mix partners. Care must be taken when tank mixing more than two products, particularly products that are not manufactured by ADAMA, due to potential variation in formulations or product quality. Seek competent advice or perform a jar test if unsure before proceeding. Note that physical compatibility tests determine whether the products will mix and are suitable for application using commercial spray equipment. Physical compatibility tests do not check for adverse crop effects or the biological efficacy of the individual products when applied as a tank-mix. Recommendations for use, handling, storage and disposal of products may also change over time. The information contained in this document is not intended to replace the product label. The product label, safety data sheet and supporting product information can be viewed on the ADAMA website www.adama.com or by scanning the QR code located on this document or the product packaging.
