Innovative New Products and Label Extensions

Folpan™ 800 WG (NR)

- 800 g/Kg Folpet
- Broad spectrum protectant fungicide targeting key diseases powdery mildew, downy mildew and botrytis.
- Alternative multi-site fungicide, mode of action: M4
- Application rate: 125 g/100L
- Withholding period: 7 days

RES+®

- Facilitates the breakdown of stubble in minimum/zero till farming systems
- Improved stubble/residue trafficability during planting
- Improved organic matter, microbial activity and soil health
- Compatible with many fallow herbicides and can be applied with fallow sprays
- Use rate: 1.2 L/ha

Ultro® 900 WG

- A unique class of chemistry (Group 23) that delivers proven, industry-leading pre-emergent control of annual grass weeds in winter pulses
- Extended residual control of annual ryegrass, barley grass and brome grass
- Registered in broad beans, chickpeas, faba beans, field peas, lentils, lupins, vetch and winter fallow
- High water solubility requiring less rainfall or soil moisture for incorporation, activation and weed control
- Significantly reduces ARG panicle numbers and seed set for subsequent cropping
- An invaluable tool within whole farm weed management and cropping rotation plans
- Split application use pattern and additional grass weed claims submitted to APVMA pending approval

Tenet® 500 SC

- Delivers greater flexibility for weed control programs in conventional and herbicide tolerant canola
- An alternative mode of action for use in canola (Group 15)
- Apply EPE with Platinum® Xtra 360 and herbicide tolerant systems herbicides
- Extends residual protection in-crop and takes the pressure off clethodim and systems herbicides, helping to prolong their lifespan
- Significantly reduces ARG panicle numbers and seed set for subsequent crops
- Flexible use patterns - can be applied IBS or EPE
- Reduced plantbacks, in addition to a higher rate EPE with a broader crop-stage application window are under development pending APVMA approval
