Monsoon®

Optical spraying has a new partner.

Product overview

Monsoon® is a unique co-formulation of bromoxynil and fluroxypyr that provides complementary activity to broaden the weed spectrum and improve control of challenging broadleaf weeds, vines and woody weeds. With flexible tank-mix options, Monsoon is an ideal partner herbicide for use in fallow (including OSST), without the volatility concerns or re-cropping limitations of some alternative herbicide options.

At a glance

- Two modes of action for complementary control of problem weeds, including fleabane, caltrop, cowvine, volunteer cotton, bladder ketmia and saltbush
- Registered for use in summer and winter fallows, including application via optical spot spray technology
- Broad range of compatible tank-mix partners
- Low volatility and relatively short plant-back intervals, maintaining crop rotation flexibility in the northern cropping zone
- Can also be applied in cereals
- Great alternative in 2,4-D sensitive areas

Pack type:	COEX HDPE
Pack size:	20 L
Pallet size:	800 L (40 x 20 L)
Items per sale unit:	1
UN Number:	2902
Innovation Centre (Agency):	No
Hazardous code:	2X
Barcode (Monsoon 20 L):	09326512032959

Product information

Active ingredient:

Bromoxynil 300 g/L
Fluroxypyr 150 g/L

Mode of action:

Group 6/Group 4

Formulation:

Emulsifiable Concentrate (EC)

Registered use patterns:

Fallow, OSST, winter cereals
(wheat, barley, triticale)

Application information

Application timing:

Post-emergent

Target weeds:

Broadleaf weeds, vines and
woody weeds

Water volume:

Ground application:
Minimum 50 L water/ha
OSST: 100 L water/ha

Spray quality:

COARSE droplet spectrum

Re-entry period:

Once spray has dried

Rainfastness:

3 hours
