Firepower® 900 Herbicide

The low odour, high load grass herbicide specialist for forestry and industrial vegetation management

Product Overview

Firepower® 900 is a highly concentrated emulsifiable concentrate (EC) formulation containing 900 g/L haloxyfop, specifically designed for the control of annual and perennial grasses in forestry and industrial vegetation management (IVM). Its advanced formulation delivers exceptional efficacy for reduced application rates and handling.

Firepower® 900 is suitable for use in a variety of settings, including forestry pre and post-planting weed control and IVM applications on rights-of-way, utility corridors, and industrial sites.

GROUP 1 HERBICIDE

Mode of Action

Firepower® 900 is a Group 1 herbicide.

It acts as an acetyl-CoA carboxylase (ACCase) inhibitor, targeting the enzymatic processes specific to grasses, resulting in the rapid cessation of growth and eventual plant death. Its systemic activity ensures that the active ingredient is translocated to the growing points of the target weeds, providing effective control from the roots to the shoots.

Firepower® 900 is rapidly degraded in soil and does not pose significant groundwater contamination risks when used as directed. Adhere to label instructions to minimize off-target movement and environmental impact.

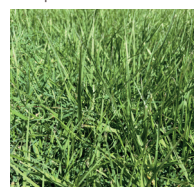

Weeds controlled

Firepower® 900 is highly effective against a range of grasses including:

African Love Grass

Paspalum

Crowsfoot

Kikuyu

Rhodes Grass

Green Couch

HERBICIDE

Quali-Pro® Negate®

At a glance

Grass weed specialist	Registered for control of over 20 troublesome annual and perennial grass weeds in forestry and IVM situations, including Green Couch, Rhodes Grass, Rats Tail Grass, Johnson Grass, kikuyu, Setaria, Paspalum, Crowsfoot Grass, Liverseed Grass, Summer Grass, Barnyard Grass, Panic, Buffel Grass, Mossman River Grass, and Brome Grass
High-Load Formulation	900 g/L haloxyfop reduces handling and storage needs while optimizing operational efficiency
Low Odour	Enhanced user comfort during application
Excellent compatibility	Firepower 900 can be tank mixed with a wide range of complimentary herbicides for one-pass convenience e.g. Galigan, Victory 600, Simanex, Platinum Xtra 360 and many glyphosate formulations.
Forestry safety	Safe for use in <i>Pinus radiata</i> , <i>P. pinaster</i> , <i>P. elliotii</i> , <i>P. carabea</i> and <i>Eucalypt</i> spp. plantations

How to get the best results from Firepower® 900

- Always apply Firepower® 900 with sufficient water to ensure adequate coverage of target weeds. For ground application, 150L/ha is recommended. For aerial application, a minimum spray volume of 30L/ha is recommended using nozzles that deliver droplets with a VMD of 200-300 microns.
- Be mindful of nearby desirable turf grasses, as this product will damage or kill Green Couch, Qld Blue Couch, Zoysia, Buffalo, Kikuyu and Paspalum.
- Avoid application during heavy rainfall or if rain is likely to occur within one hour, or on saturated soils
- Do not apply directly to watercourses or drainage channels.
- DO NOT apply to weeds which may be stressed (not actively growing) due to prolonged periods of extreme cold, moisture stress (waterlogged or drought affected), poor nutrition or previous herbicide treatment as reduced levels of control may result.
- While Firepower® 900 does contain built-in surfactants, the addition of a suitable adjuvant may be useful to enhance efficacy and improve coverage on dense stands or hard-to-wet grass weeds.
- Always wear appropriate personal protective equipment (PPE) as per label recommendations.
