ADAMA RX-380 is a highly concentrated formulation of the cotton growth regulator, mepiquat chloride. **With 10 times the concentration of existing formulations, RX-380 significantly reduces packaging wastage and handling.**

- 380 g/L mepiquat chloride in a soluble concentrate (SL) formulation.
- Apply as multiple split applications (25 to 100 mL/ha) or as a single application (75 to 200 mL/ha).
- Apply in a minimum water volume of 80 to 100 L/ha (ground application) or 20 to 30 L/ha (aerial application).
- Compatible with a wide range of ADAMA products, including Albatross® 200, Ballistic® Elite, Electra® 225, Firepower®, Lascar®, Platinum® Xtra 360 + Hasten*, Primal® + Pulse*, Receptor®, Shogun® + Hasten*, Skope® + Hasten* and Wizard®.
- Always read and follow the directions for use on the registered label before application.
- Look for the differentiated blue formulation colour and 15 L pack size!
