Preparation of spray mixture: Half fill the tank with water. Add the required amount of Agil 100EC and water in a separate container and mix well until the mixture is thoroughly uniform. Add the mixture to the tank and add water to the required amount as the agitator is running.
Application timing: Agil 100EC can be applied at any time during the growing season independently of crop development but after emergence of the grasses. Early stages of the grass weeds are more susceptible to Agil 100EC than the late tillering or shooting stages. For best results Agil 100EC should be applied when weeds are actively growing.
Application Technique: Agil 100EC must be applied with suitably set up spraying equipment. For broadcast or band application, use nozzles suitable for herbicides. While spraying avoid stops, slowdowns and leaks in order to ensure uniform application.
Spray Volume: Ground application: 200 - 400L/Ha. Knapsack Sprayer application: Minimum 80L/Ha
