

# GRIZLY®

A systemic and contact insecticide for the control of caterpillars, whiteflies and thrips on roses and tomatoes

ADAMA

# 1 PRODUCT + 2 MODES OF ACTION = EXCELLENT, QUICK AND LONG LASTING ACTIVITY AGAINST MANY PESTS

Grizly® is a combination of two different molecules Novaluron and Imidacloprid which have systemic and contact activity against a wide spectrum of pests:  
Chewing insect pests - caterpillars, termites, grasshoppers, army worms, grubs, Tuta absoluta and other defoliators on these crops.  
Sucking insect pests - whiteflies, aphids and thrips.

## Ingestion and Contact Activity

Disrupting cuticle formation and deposition occurring when insects molt, resulting in their death

**NOVALURON**  
INSECT GROWTH REGULATOR

**IMIDACLOPRID**  
NEONICOTINOID

Interfering with the transmission of stimuli in the insect nervous system, resulting in the insect's paralysis and eventual death

## Systemic Activity

## BENEFITS TO THE GROWER:

Broad spectrum activity on many pests

Less number of applications  
thus low cost of production

Rain fastness

Easy to use SC formulation

## DIRECTIONS FOR USE:

### Preparing spray mixture:

Mix Grizly® with water at the recommended rates and foliar apply on roses and tomatoes.

**Application:** Grizly® can be applied by means of any suitable knapsack sprayer (including motorized) which is able to distribute the spray solution evenly and effectively over the target area.
