

General information:

Mavric AF is a synthetic pyrethroid that controls Aphids, Thrips and Mites in Roses and Carnations.

Mode of Action

Mavric AF is a contact insecticide with stomach poison that interferes with central and peripheral nervous system of insects.

RECOMMENDATION FOR USE:

Crop	Pest	Application Rate	Spray Interval	REI
Roses Carnations	Aphids, Thrips Mites	0.1-0.3L/Ha, 10-30ml/100L water, 2-6ml/20L water	7-14 days and 5-7 days in higher infestation sprayed with higher rates	6 hours/when spray dries

Preparation of Spray Mixture:

Fill the spray tank with the required amount of water, add the required amount of Mavric AF and adjuvant as may be required, then mix thoroughly.

Applications Technique

Always ensure good coverage of the foliage and other plant surfaces using high volume sprays. Apply Mavric AF at 7-14 days interval in fast growing crops. When limit of infestation is high, use the higher rates and repeat applications after 5-7 days interval.

Resistance management

Continued repeated use of Mavric AF alone over an extended period of time may lead to development of resistant. To avoid such a situation, always alternate Mavric AF with other insecticides that have a different mode of action.
