

**General Information:** Banjo 500SC is a protective fungicide with multi site mode of action for the control of botrytis in Roses

**Mode of Action:** Banjo 500SC is a fungicide with multi site mode of action that disrupts energy production in the fungus. When applied to plants it remains primarily on the plant surface and kills any fungal spores that come into contact with it

**Recommendations for use:**

Crop	Disease	Application Rate
Roses	Botrytis	1L/ha, 100ml/100L water, 20ml/20ltr of water

**Re-entry period:** After 6 hours.

**Preparation of Spray Mixture:** Fill the spray tank with half amount of water. Add the required amount of Banjo 500SC, then fill the water to the required level and mix or agitate thoroughly to uniformity. Ensure that the spray mixture is used the same day. Do not leave the spray liquid in the sprayer for long periods.

**Application timing:** Being a protectant fungicide, spraying should commence before the disease infection.

**Applications Technique:** Use adequate water to ensure complete coverage of the foliage and stems, increasing the volume as growth progresses, particularly in dense crops and under high or severe botrytis risk conditions. Ensure that the sprayer is clean and calibrated correctly, to give even application. Apply at the recommended water volumes of 1000 L/ha.
