

### General Information:

Soprano C 250 SC is a fungicide with protective and curative action against yellow and stem rust in wheat.

### Mode of Action:

Soprano C 250 SC is systemic thereby inhibiting metabolism of fungi cells infesting useful plants.

### Recommendation for use:

Crop	Disease	Application Rate	Spray Interval	P.H.I
Wheat	Yellow and stem rust	0.8L/ha, 400ml/100L water, 80ml/20L water,	10-14 days	30 Days

**Preparation of Spray Mixture:** Fill the spray tank with the required amount of water, add the required amount of Soprano C 250 SC and adjuvant as may be required, then mix thoroughly.

**Application Timing:** Start applying Soprano C 250 SC when the disease signs are seen or when disease is actively establishing in the field. Spray at an interval of 2-3 weeks depending on the disease and weather condition.

**Applications Technique:** Shake the container gently before use. Soprano C 250 SC may be applied by ground application with tractor and boom sprayer, aerial application or knapsack sprayer. For tractor mounted and knapsack application use a spray volume of at least 30L per Ha. Always use a well-calibrated sprayer to ensure good coverage of the foliage.

**Resistance management:** Continued repeated use of Soprano C 250 SC alone over an extended period of time may lead to development of resistant fungal strains. To avoid such a situation, always alternate Soprano C 250 SC with other fungicides that have a different mode of action.
