

ADAMA

When it comes to apples, protection from insect pests and disease is key to delivering high quality fruit. By using the world's largest library of actives to formulate new and timely solutions, ADAMA can provide Canadian apple growers with more choices and better more timely options to protect their crops against insects and disease.

## CORMORAN®

The synergy of the two modes of action in CORMORAN® with novaluron and acetamiprid leads to more consistent control, more flexibility when it comes to application timing and better control of 15 of the key insects that love apples as much as you do!

### Key Benefits

- Rapid knockdown action combined with extended residual control
- Dual modes of action for resistance management
- Control of all damaging stages of target insects including immatures and adults
- Two distinct modes of action providing excellent control
- Excellent rotational product

### Re-Entry & Pre-Harvest Intervals

Re-entry interval:

- Fruit thinning: 7 days
- All other activities: 12 hours

Pre-harvest interval: 14 days

**GROUP 4 & 15**

### Best for controlling:

**Key pests:** Aphids, Codling Moth, Leafhoppers, Plum Curculio, Tentiform Leafminer

**Other pests:** Apple Maggot, Dogwood Borer, European Apple Sawfly, Green Fruitworm, Gypsy Moth, Japanese Beetle, Lesser Appleworm, Mullein Bug, Oriental Fruit Moth, Tarnished Plant Bug

## FOLPAN® 80 WDG

FOLPAN® 80 WDG, a water-dispersible granular fungicide, controls Scab, as well as a host of other foliar diseases. It delivers exceptional protection against the most common and economically damaging diseases in apples.

Use FOLPAN® 80 WDG in a regularly scheduled maintenance program.

### Key Benefits

- Multi-site-contact mode of action
- Protective ability
- Broad-spectrum disease control
- Favourable REI and harvest flexibility.

### Re-Entry & Pre-Harvest Intervals

Re-entry interval:

- Harvesting (hand and mechanical): 1 day
- Hand thinning fruit: 6 days
- All other activities: 12 hours

Pre-harvest interval: 1 day

**GROUP M4**

### Best for controlling:

Alternaria Leaf Spot, Black Rot, Brooks Spot, Fly Speck, Scab, Sooty Blotch

## BREVIS™ 150 SC NEW

BREVIS™ 150 SC is a growth enhancer that provides consistent fruitlet thinning in apples and pears, increasing the marketability of your fruit while cutting down on hand thinning. Powered by the novel active ingredient Metamitron, BREVIS™ 150 SC offers greater application flexibility, making it the ideal choice for pome fruit growers.

### Key Benefits

- Improved quality and marketability
- Proven consistent fruit size and uniformity
- Flexible application window

### Re-Entry & Pre-Harvest Intervals

Re-entry interval: Eastern Canada 12 hours

Pre-harvest interval: 72 days

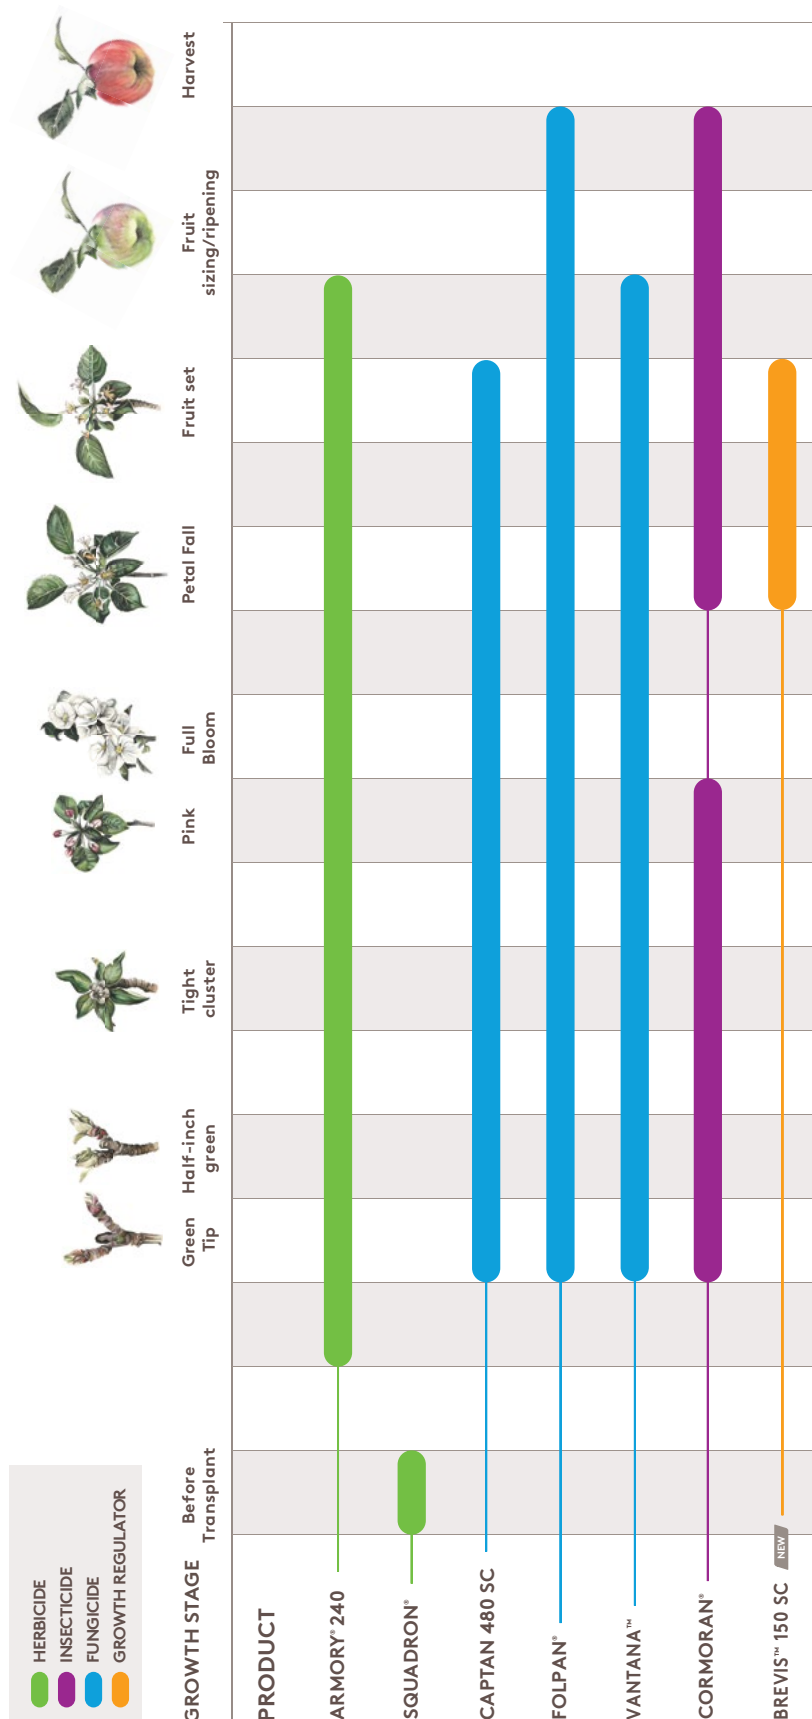

**CLICK  
HERE  
FOR FULL  
PRODUCT  
DETAILS**

### Innovation At Work:

BREVIS™ 150 SC has an effect similar to shading, causing a temporary reduction in carbohydrate production, thus promoting a natural fall of lateral fruitlets, preserving the dominant or king fruit.

# APPLE SOLUTIONS

Timing based on using the product alone. Please refer to tank-mix partners label for crop timing.

Always read and follow label directions.
