ARMORY® 240

HOW IT WORKS:

ARMORY® 240 works on contact to disrupt plant cells and is rainfast in 30 minutes, leading to more rapid drydown of plants and weeds when compared to systemic herbicides. Harvesting can typically begin within 4–10 days, depending on crop and weather conditions.

WATER VOLUME:

- Ground: 90–200 L/ac
- Air: 18 L/ac

Ground sprayer application will facilitate use of higher water volumes and provide more complete coverage. Aerial application may be used where the crop is too dense or the ground too soft for ground rigs. Apply by means of an aircraft fitted to apply uniform spray coverage.

RAINFASTNESS:

30 minutes

REGISTERED AND SUPPORTED TANK MIXES:

- Agral® 90, LI 700®, Liberate®, Other non-ionic surfactants
- Carfentrazone

MIXING INSTRUCTIONS:

Use LI 700® wetting and spreading agent at 2.5 L per 1000 L of spray solution (0.25%) or Agral® 90, wetting and spreading agent, at a rate of 1 L for each 1000 L of spray mixture (0.10%) unless otherwise stated.

ADJUVANT RATE:

- 0.25% v/v LI 700®
- 0.10% v/v Agral® 90

GRAZING RESTRICTIONS:

Crop waste remaining after harvest (e.g. pea vines, alfalfa stems) may be used as a feed supplement for livestock.

STORAGE:

Store above 0° C.

QUICK TIPS:

Best results under cloudy conditions or in the evening. Suggested conditions for aerial applications are a temperature below 25° C, humidity above 50% and wind speed below 9 km/hr at flying height.
