

MOLLUSCICIDE

Pelleted bait

MAPP19499

A ready-to-use, pelleted bait containing 2.94% w/w anhydrous ferric phosphate for the control of slug damage in a range of agricultural and horticultural crops. Rainproof formulation.

Ingredients

- Anhydrous ferric phosphate 2.94% w/w

Important information

IMPORTANT INFORMATION FOR USE ONLY AS A PROFESSIONAL MOLLUSCICIDE		
Crops	Maximum individual dose (kg product/ha)	Maximum total dose
Borage, linseed, mustard, oilseed rape, poppy, soya bean, sunflower	7	28 kg product /ha/year
Celeriac, radish, swede, turnip	7	28 kg product /ha/year
Barley, durum wheat, oats, rye, triticale, wheat	7	28 kg product /ha/year
Forage maize, grain maize, sweetcorn	7	28 kg product /ha/year
Fodder beet, red beet, sugar beet	7	28 kg product /ha/year
Beans without pods - fresh, combining pea, vining pea, dwarf French bean, field bean, runner bean, broad bean - fresh.	7	28 kg product /ha/year
Baby leaf crops, chicory - witloof, endive, lamb's lettuce, land cress, lettuce, purslane, red mustard, rocket, spinach beet	7	28 kg product /ha/year
Broccoli/calabrese, Brussels sprout, cabbage, cauliflower, kale	7	28 kg product /ha/year
Carrot	7	28 kg product /ha/year
Celery	7	28 kg product /ha/year
Leek	7	28 kg product /ha/year
Bulb onion, garlic	7	28 kg product /ha/year
Fennel leaves, globe artichoke, salad onion	7	28 kg product /ha/year
Potato	7	28 kg product /ha/year

Time of application: a one day pre-harvest interval must be observed for all crops.
A minimum period of 7 days must elapse between applications for all crops.
**READ THE LABEL BEFORE USE. USING THIS PRODUCT IN A MANNER THAT IS INCONSISTENT WITH THE LABEL MAY BE AN OFFENCE.
FOLLOW THE CODE OF PRACTICE FOR USING PLANT PROTECTION PRODUCTS.**

Dispose of contents/container to a
licensed hazardous waste disposal
contractor or collection site except for
empty, clean containers which can be
disposed of as non-hazardous waste.
**To avoid risks to human health and
the environment, comply with the
instructions for use.**

Environmental Protection

Do not contaminate water with the product
or its container. Do not clean application
equipment near surface water. Avoid
contamination via drains from farmyards
and roads. Do not empty in to drains,
dispose of this material and its container in
a safe way.

Storage and Disposal

KEEP AWAY FROM FOOD, DRINK AND
ANIMAL FEEDINGSTUFFS.
KEEP OUT OF REACH OF CHILDREN.
Do not use original packaging or empty
container for any other purpose.
KEEP IN ORIGINAL CONTAINER, tightly
closed, in a safe place.
DO NOT RE-USE container for any purpose.
DIRECTIONS FOR USE:
Full instructions: see back of this bag.

**For advice on medical emergencies, fires
or major spills telephone the National
Chemical Emergency Centre on 01865
407333**

*The (COSHH) Control of Substances
Hazardous to Health Regulations may
apply to the use of this product at work.*

Batch number: see packaging.

SAFETY PRECAUTIONS

Operator Protection

WEAR SUITABLE PROTECTIVE GLOVES when
handling the product or applying by hand-
held equipment.

DO NOT EAT, DRINK OR SMOKE, when using
this product.

WASH HANDS AND EXPOSED SKIN before
meals and after work.

Gusto IRON is packaged in
high quality MINrinse bags

- Fully recyclable - Accepted by all of the major
recycling and waste disposal companies.
- Not classified as hazardous waste - Empty packaging
can be treated as a triple rinsed container.
- Easy to store - Packs can be stacked safely due
to the unique antislip technology.

LDPE

Please recycle
this packaging.

DIRECTIONS FOR USE

IMPORTANT: This information is approved as part of the Product Label. All instructions within this section must be read carefully in order to obtain safe and successful use of this product.

Gusto® IRON is a blue mini pellet containing ferric phosphate which occurs naturally in the environment. Gusto IRON controls all species of slugs including *Deroceras reticulatum* (grey field slug), *Arion* spp and *Arion vulgaris* (Spanish slug). After the slug has eaten the pellet, feeding will cease to continue resulting in protection of the crop from feeding damage.

RESTRICTIONS OR WARNINGS

Gusto IRON is attractive to slug species that damage plants.

Due to the mode of action of Gusto IRON, no excessive slime secretions will be evident on, or around, the crop and the slugs retreat underground to die and dead slugs will not be visible on the soil surface. Effectiveness should therefore be measured by the decreased feeding damage to the crop.

Controls slugs feeding on the soil surface in crops of vegetables grown outdoors, reducing damage during plant emergence and lower leaf damage. Damage caused by sub-surface activity to underground plant parts such as potatoes, carrots and other roots, tubers, bulbs, corms and rhizomes etc. may not be reduced. Similarly, damage caused to aerial plant parts such as Brussels sprout buds etc. may not be reduced.

PESTS CONTROLLED

For the control of slugs in the crops listed above.

CROP SPECIFIC INFORMATION

Gusto IRON can be applied with a maximum individual application dose of 7 kg/ha up to a maximum total dose of 28 kg/ha. Gusto IRON provides protection during establishment, applying at later growth stages may not provide any benefit.

Time of application

Apply as a broadcast treatment as soon as damage is seen or indicated by slug trapping. For some crops e.g. cereals and oilseed rape, where slug activity is present prior to crop emergence, it is advised to treat the crop before emergence and after seed bed preparation is complete.

Application timing should be based on likely pest presence and the part of the crop attacked by the pest e.g. seeds, seedling plants or harvestable produce.

A repeat application may be required if pest pressure remains high. A further dose of 7 kg/ha may be carried out if there are no pellets remaining on the soil surface from the previous application (typically 1 week later). The maximum total dose that may be applied per year is 28 kg/ha.

RATE OF USE

Maximum individual dose: 7 kg/ha

Maximum total dose: 28 kg/ha of product per year

APPLICATION

This product is suitable for application through the following spreaders (or other comparable machines):

Stocks FanJet Pro 65

Logic TFS

Do not apply using other machinery. Calibrate all equipment before use. Take care to ensure granules do not remain lodged within foliage, florets or other parts of the plants. Apply evenly over the plants to be protected.

Slug Trapping

To establish the need for pellet application on winter wheat or winter oilseed rape, monitor for slug activity. Where slug traps are used, use a foodstuff attractive to slugs e.g. chicken layers' mash which has proven to be particularly effective.

For further information on slug control and damage risk assessment, please refer to the AHDB Integrated Slug Control information which can be found at www.ahdb.org.uk/knowledge-library/integrated-slug-control

Important

- Complete control of slugs is difficult to achieve with any type of molluscicide, so some crop loss may occur especially in wet seasons. Best control is achieved by a programme of good husbandry and properly timed applications of a pellet bait such as Gusto IRON.
- The first application of Gusto IRON is usually made as a preventative measure as specified. Follow-up applications may be required, especially in wet seasons. Assessment by slug trapping will indicate when slugs are active at the soil surface and if conditions are suitable for further Gusto IRON treatment.
- Late application of pellets to broad-leaved plants may result in lodging of the pellets in foliage. Care should be taken to avoid this when making applications to edible crops, e.g. lettuce and cabbage. In cabbage and cauliflower apply prior to hearting or curd formation.
- AVOID application if heavy rain is expected, as this may reduce effectiveness of the pellets.
- Best results are obtained when slugs are actively feeding, generally following a period of light rain in mild conditions. Where a heavy attack is likely to occur, re-apply 2-3 weeks later or whenever slug trapping shows it to be necessary.
