# SYMETRA®

A co-formulation of azoxystrobin and isopyrazam for the control of Sclerotinia stem rot on oilseed rape.

## Key Benefits

- Two active ingredients with complimentary behaviour in and on the leaf
- Both active ingredients have proven efficacy against Sclerotinia
- Crop health enhancement increases yields, even in the absence of disease
- Non triazole solution
- Two modes of action for effective resistance management

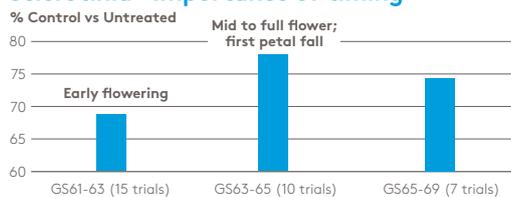

## Crop Information

With the primary target being Sclerotinia, SYMETRA® acts on the disease by providing protection both on the plant and within it:

- Isopyrazam (IZM) binds to the waxes on the leaf surface to form a protective barrier and a wall of defence
- Azoxystrobin works within the leaf tissue as another line of defence

Increased efficacy when SYMETRA® is applied at GS63-65 (between mid-full flower (20-50%) and when the first petals

### Sclerotinia – Importance of timing

## Product Information

**Active ingredients:**  
200g/L azoxystrobin  
125g/L isopyrazam

**Formulation:**  
Suspension Concentrate

**Pack size:** 5 litres

## Application Information

**Water volume:** 100L/ha

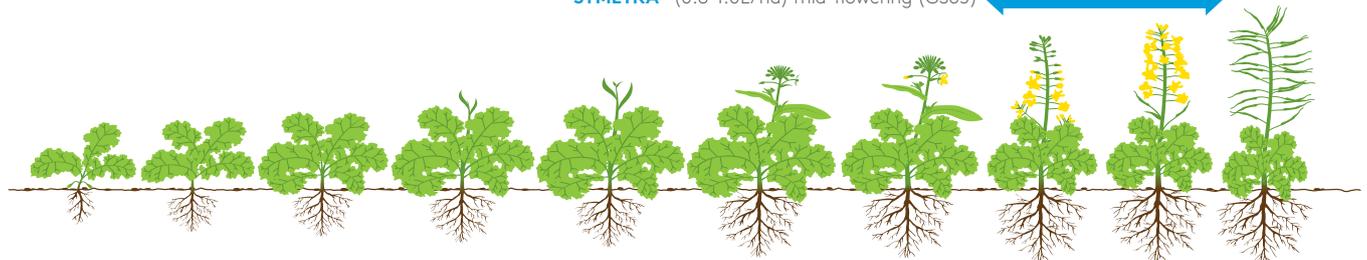

**Spray quality:** Medium

**LERAP:** B

**Rate:** 1.0L/ha

**Timing:** Early flower (GS61) to end of flowering (GS69)

SYMETRA® (0.8-1.0L/ha) mid-flowering (GS65)

As well as robust disease control the combination also maintains a healthy plant maximising green leaf retention which results in yield and oil benefits even in the absence of disease. Acting as a barrier to disease SYMETRA® gives incidental control of other key oilseed rape diseases including Alternaria and Botrytis.

## SYMETRA® Tank Mixes

### 2-Way Mixes

The following tank mixes have been tested under continuous agitation for physical compatibility with SYMETRA® and will mix at recommended rates:

#### Fungicides

Caramba	Folicur	Orius 20EW	Skyway Xpro
Corinth	Juventus	Plover	Sparticus Xpro
Filan	Kestrel	Proline 275	

#### Insecticides

Biscaya	Insyst	Steward
Hallmark With Zeon Technology	Mavrik
