Bradley	ES Kira	Kaspian	Magepi CS	Rival	
Brontis	ES Picker	Katy	Manatan	Roscof	

Timing

TITUS should be applied in the Spring up to the 4 collar stage (6 leaves fully expanded) of the crop.

Rate of Use

Apply TITUS once only at 50g/ha with 0.1% nonionic wetter or Torpedo for the control of grass weeds. Apply TITUS once only at 40g/ha with recommended herbicide for control of grass and broadleaved weeds. Always add a nonionic wetter or Torpedo at 0.1% v/v except in mixtures with Bromoxynil.

Restriction

To avoid build up of resistance, do not apply this or any other product containing an ALS inhibitor herbicide with claims for control of grass weeds more than once to any crop.

Following Crops

Only Winter Wheat should be drilled in the same calendar year as a treated crop. Only Barley, Wheat or Maize should be sown in the Spring of the year following treatment with TITUS. In the second Autumn following treatment, any crop may be planted.

***New for 2017**
