

ADAMA

CHLORMEPHON®

A growth regulator containing both ethephon and chlormequat for the reduction of lodging and preserving quality and yield in cereal crops.

Key Benefits

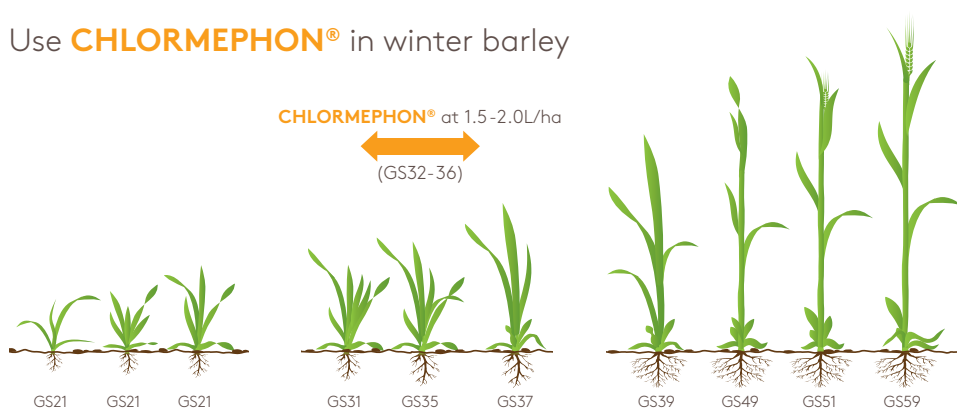

- Ethephon reducing crop height
- Chlormequat increasing root mass and thickening stems
- **CHLORMEPHON®** provides a strong mixture for lodging control

Crop Information

| Crops | Max individual dose (L/ha) | Max total dose per crop (L/ha) | Latest timing |
|---------------|----------------------------|--------------------------------|-------------------------------|
| Winter wheat | 2.0 | 2.0 | Before flag leaf just visible |
| Winter barley | 2.0 | 2.0 | Before flag leaf just visible |
| Spring barley | 1.5 | 1.5 | Before flag leaf just visible |

Use **CHLORMEPHON®** in winter barley

CHLORMEPHON® at 1.5-2.0L/ha
(GS32-36)

Product Information

Active ingredients:
155g/L ethephon &
305g/L chlormequat

Formulation:
Suspension Concentrate

Pack size: 5 litres

Application Information

Water volume: 225-340L/ha

Spray quality: Medium

Aquatic buffer: n/a

Crop height reduction

T1 application

Mean of 3 winter barley trials - 2021
