

Rotation Options for Your Acreage

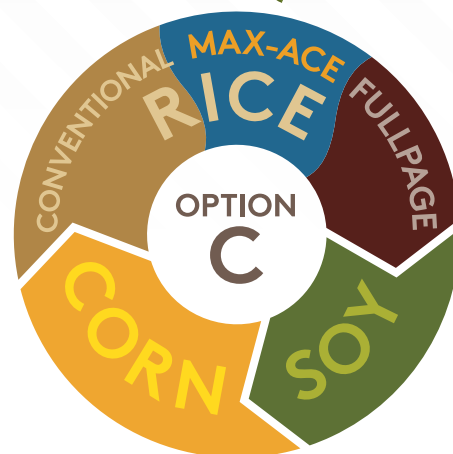

Providing Flexibility to Grow Profits

INCLUDE SOYBEANS in the rotation for growers who choose a herbicide residual program.*

ALTERNATE the Max-Ace with FullPage Rice Cropping Systems year-over-year for growers who want to stick with rice.*

ROTATE CROPS based on what will maximize yield returns while minimizing herbicide resistance through different modes of action.

**Observe rotational limitations for preceding year's herbicide plan.*

RESISTANCE MANAGEMENT IS KEY in all cropping systems. Proper scouting and control and removal of weed escapes as well as sanitation, tillage-as-appropriate and crop competition will give growers long-term benefits.

GROWERS CAN PURCHASE AND APPLY WITH CONFIDENCE the correct amount of herbicides at the right times for their particular rice cropping solutions based on the guidelines from ADAMA.

ADAMA & RICETEC HAVE DESIGNED SPECIFIC RICE SYSTEMS that improve herbicide tolerance & generate industry-leading yields.

MIX THINGS UP TO STAY WEED-FREE. Rotating between systems and other crops annually provides the opportunity to use different tillage and herbicide modes of action.

ADAMA & RICETEC STRIVE TO DELIVER ever-improving solutions for rice growers, both today and tomorrow.
