

# Temper™ More

## Cold Happens:

What you need to know for storage best practices to protect your Temper More.

## Cold Storage Testing: Have the Confidence in Temper More

Temper More has undergone cold stability testing in which the product was put through a series of freeze-thaw cycles to confirm that the formulation withstood the harsh environment that mimics real-life situations for our distribution partners, ag retailers and growers alike. Through all the tests, formulation characteristics (viscosity, droplet size, appearance and emulsion stability) remained within the acceptable range.

## Storage Recommendations

- Store in a cool, dry, well-ventilated area.
- Avoid excessive temperatures (hot or cold) if at all possible
- Keep original containers tightly closed
- Protect from direct sunlight and moisture
- Follow the storage instructions on the product label or SDS (Safety Data Sheet)

## If freezing does occur:

- Warm the container to room temperature
- Agitate thoroughly before and continually during use

Always read and follow label directions.
