

INSECTICIDE

ATEKA™

Ateka™ is a high-load insecticide designed to help fruit and vegetable growers get fast and effective control of the toughest sucking pests.

It sucks to suck.

Fruit and vegetable growers are facing increased pressure from tough sucking pests that can quickly multiply, reduce plant health, and reduce their marketable yield. As insects become harder to control and coverage demands rise, growers need solutions that work fast and hold strong. Ateka is a high-load insecticide built to meet those challenges quickly.

FASTER BROAD-SPECTRUM CONTROL THAT GROWERS WANT

Ateka provides dependable control of the most damaging sucking pests—including aphids, whiteflies, mealybugs, scales, thrips, psyllids, mites, and more—across a wide range of crops. Ateka's advanced performance delivers higher active loading per droplet for more efficient coverage moves quickly and systemically through both xylem and phloem, targeting juvenile stages and reducing adult reproduction for long-lasting population suppression. This broad-spectrum performance means fewer surprises and stronger protection during critical growth periods.

PROTECTION GROWERS CAN COUNT ON

Ateka works quickly and keeps working. The Ayalon™ Formulation Technology improves penetration into leaf tissues, allowing the spirotetramat to begin moving within the plant sooner for faster control. Strong systemic movement ensures lasting residual control, helping growers maintain cleaner fields with fewer follow-up sprays. This combination of speed and staying power supports more consistent pest management throughout the season.

MORE COVERAGE ON EVERY LEAF FOR GROWERS

Ateka's improved leaf penetration versus Movento® helps protect the active from rain and environmental loss, helping to ensure more active ingredient reaches its target. Improved droplet behavior and uptake give Ateka a noticeable performance advantage, even under challenging field conditions. Strong penetration and systemic movement deliver more effective insect control and reduce population growth over time.

DESIGNED TO IMPROVE RESULTS

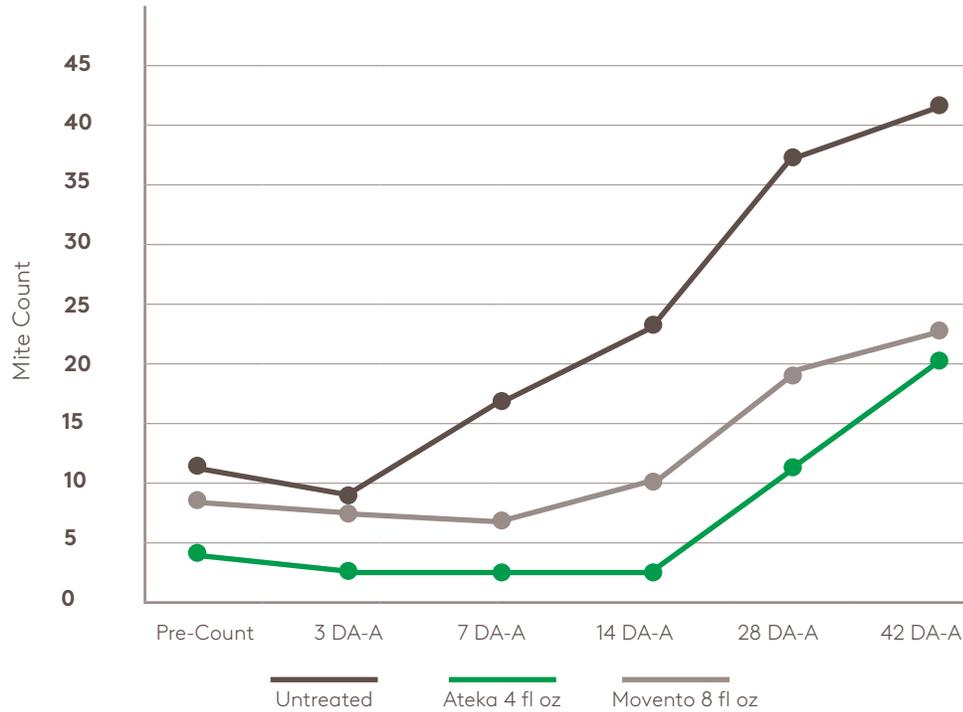

With its high-load formulation, Ateka maximizes the concentration of the active ingredient for best performance. It also allows for lower use rates and less handling compared to many alternatives. This helps simplify and streamline application routines. Lower volumes also translate to greater efficiency when treating large acreages. For growers managing multiple crops and frequent spray intervals, Ateka offers a practical, labor-saving solution without compromising performance.

ATEKA™

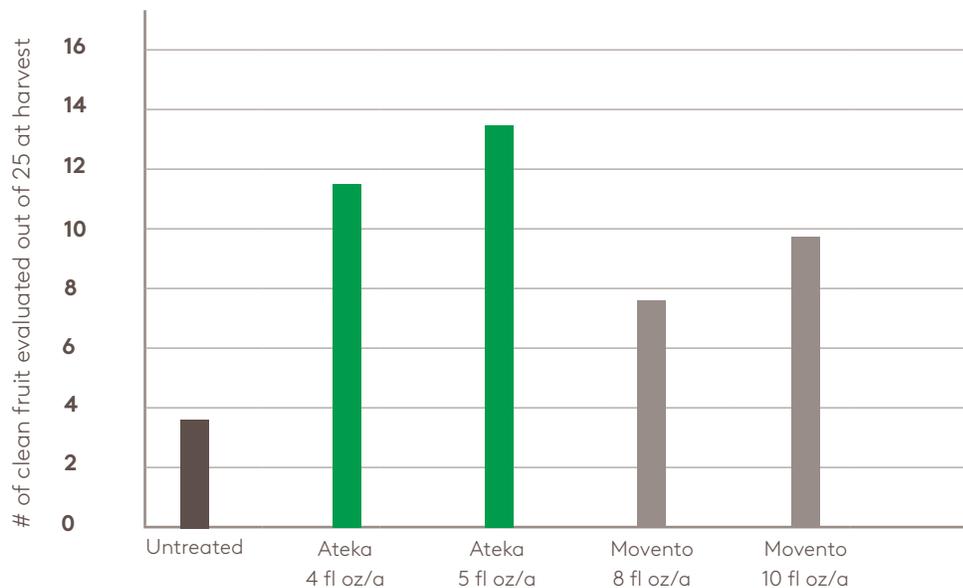

Citrus Rust Mite Count Over Time

Ateka provided better control vs. Movento®

Crop: Hamlin Oranges
Application Date: 7/18/25
Pest: Citrus Rust Mite
Location: Groveland, FL
Notes: No phyto observed

Clean Fruit at Harvest (No Scale)

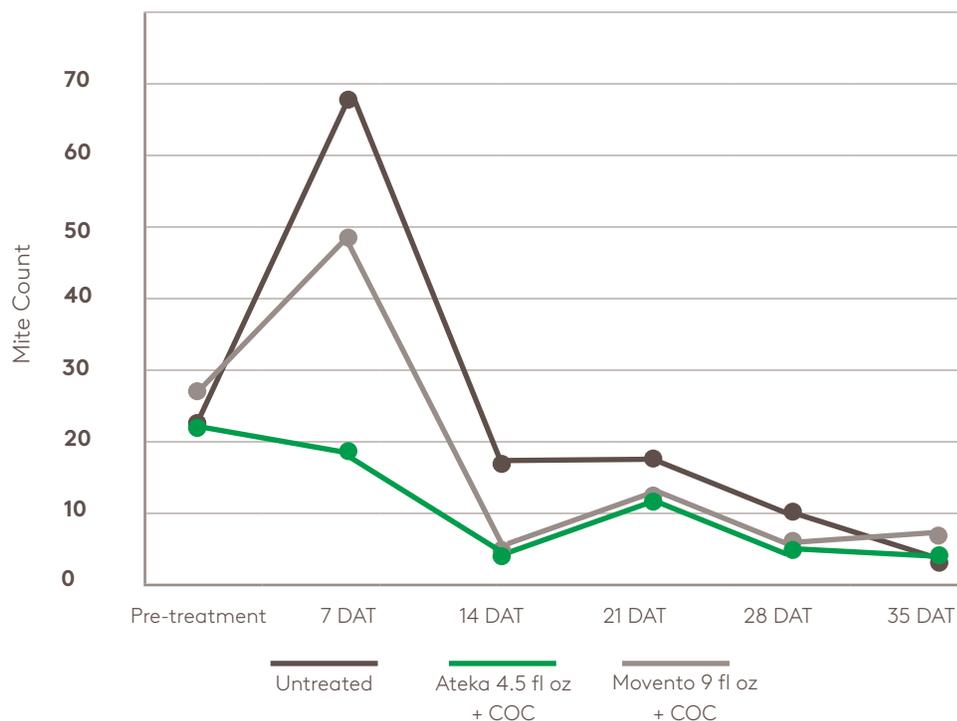

Ateka had highest amount of clean fruit at harvest

Crop: Mellogold Grapefruit
Application Date: 6/30/25
Pest: California Red Scale
Location: Porterville, CA
Notes: No phyto observed

ATEKA™

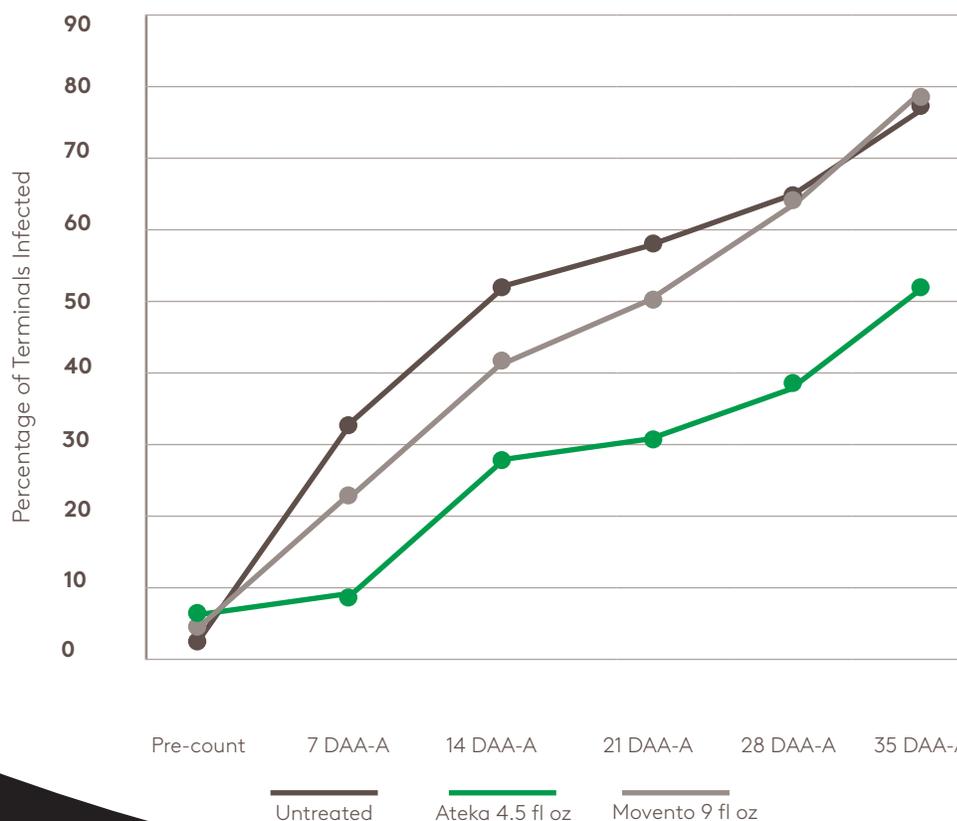

Number of Two-spotted Spider Mites Motiles Per Leaf Over Time

Ateka performed faster than Movento®

Crop: Honeycrisp Apple
 Application Date: 7/1/25
 Pest: Two-spotted Spider Mites
 Location: Traverse City, MI
 Notes: No phyto observed and was a field-to-lab study

Percentage of Terminals Infected (per 50 terminals)

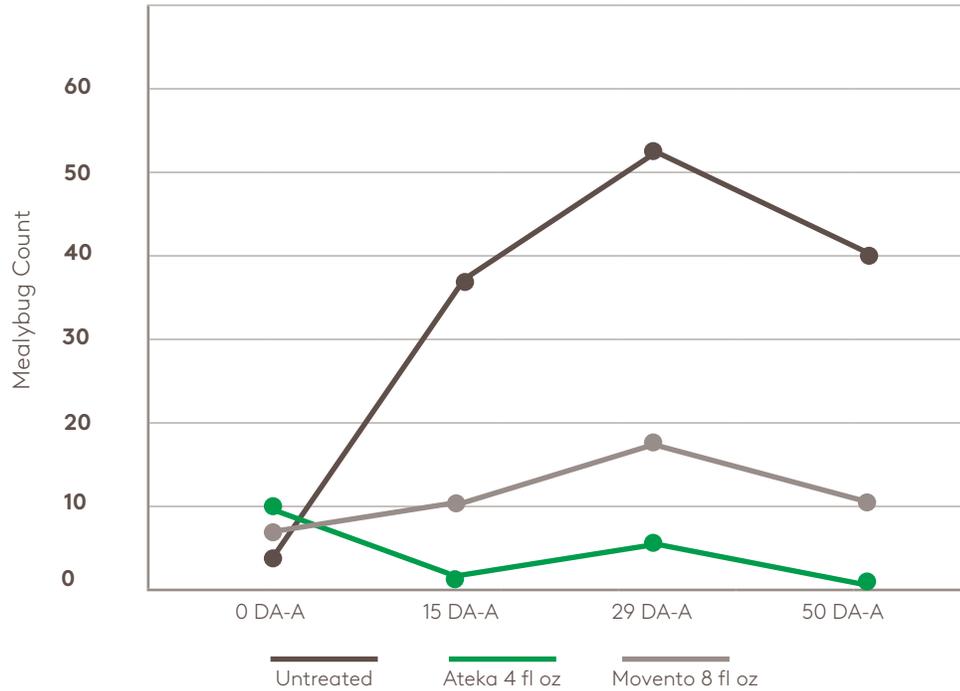

The % of infected terminals with Ateka was consistently lower than Movento®

Crop: Apple
 Application Date: 6/26/25
 Pest: Woolly Apple Aphid
 Location: Leons, NY

ATEKA™

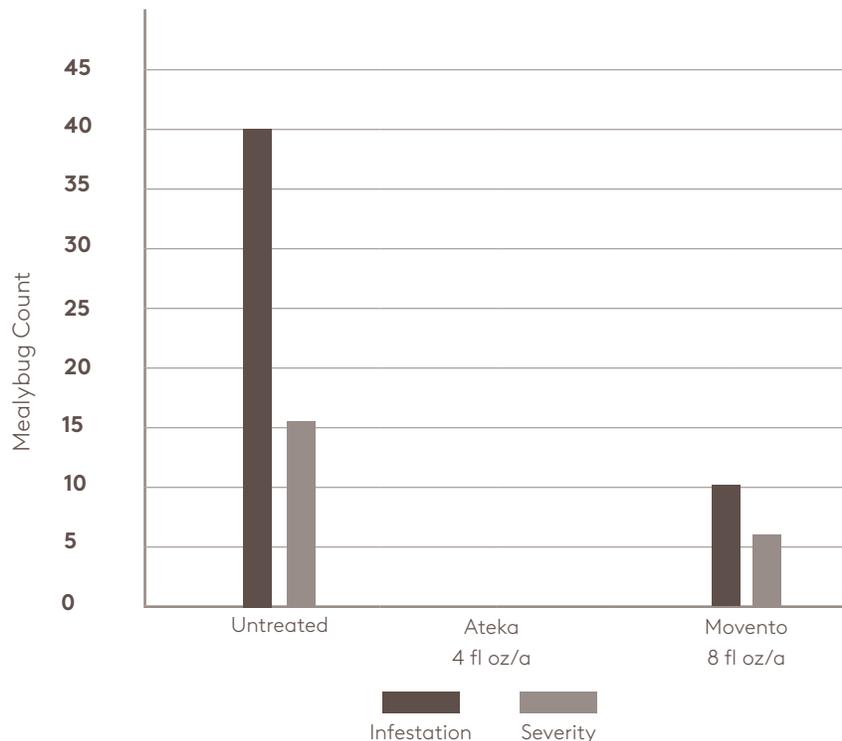

Mealybug Infestation Over Time

Ateka provided quicker and longer control vs. Movento®

Crop: Hamlin Oranges
Application Date: 7/18/25
Pest: Citrus Rust Mite
Location: Groveland, FL
Notes: No phyto observed

Mealybug Bunch Infestation 50 DA-A

Ateka showed better control than Movento® at labeled rates

Crop: Chardonnay Grape
Application Date: 6/25/25
Pest: Mealybug
Location: Dinuba, CA
Notes: No phyto observed
