

DICAMBA 4L DGA

Reliable Broadleaf Control That Strengthens Your Weed Management Program

ADAMA's Dicamba 4L DGA is a dependable dicamba herbicide designed to support disciplined weed control programs across key row crops. Built on proven dicamba chemistry, it delivers consistent broadleaf control and integrates easily into burndown and early-season programs. Formulated with DGA salt technology, it is designed to reduce volatility potential while delivering the same proven performance with less risk of off-target movement. ADAMA's Dicamba 4L DGA is a reliable foundation product that helps growers, retailers, and consultants keep weed management programs on track from the start.

Program Reliability Growers Expect

Effective weed control programs depend on products that perform consistently when conditions matter most. Dicamba 4L DGA from ADAMA delivers dependable control of key broadleaf weeds, helping ensure fields start clean and stay manageable. By supporting strong early-season control, it strengthens the overall herbicide program and helps protect the performance of residual partners applied alongside it.

Program Discipline Growers Want

Successful weed management begins with a disciplined approach to controlling weeds before they gain momentum. Dicamba 4L DGA from ADAMA supports structured burndown and early-season programs that reduce weed competition and maintain control throughout the season. By helping remove early weed pressure, it allows other herbicide modes of action to perform as intended within a well-planned program.

Operational Simplicity Growers Need

Retailers, growers and applicators need herbicides that fit smoothly into real-world operations. ADAMA's Dicamba 4L DGA offers flexible application timing and compatibility with commonly used burndown tank mixes. Its straightforward integration into existing weed control programs helps simplify planning, mixing, and application decisions across acres and crop systems.

Risk Reduction Growers Bank On

Weed escapes can quickly turn into costly problems. ADAMA's Dicamba 4L DGA helps reduce that risk by providing reliable control of key broadleaf weeds before they become harder and more expensive to manage. By supporting a strong start to the season, it helps growers avoid additional passes, protect crop potential and maintain confidence in their program.
