HOW IT WORKS:

PHANTOM® 240 SL is a selective herbicide that can be applied as an early pre-plant, pre-plant incorporated, pre-emergent or post-emergent treatment in various crops. The application method depends upon the crop, anticipated weed spectrum and the preference of the applicator. With early pre-plant and pre-emergent treatments, susceptible weeds emerge, are present as stunted plants and then die. When PHANTOM® 240 SL is applied post-emergence, absorption may occur through both the roots and foliage. Susceptible weeds stop growing and eventually die.

CROP STAGING:

For best results, spray when weeds are in the seedling stage.

Crop	Crop Stage	Soil Zone
Alfalfa, established (seed production only) ¹	Apply before alfalfa reaches 12 inches.	N/A
Alfalfa, seedling (forage or seed)	After the 1 st trifoliate leaf.	Black, grey wooded and irrigated brown soils.
Dry beans (pinto, pink, red)	Up to and including the 2 nd trifoliate leaf.	Black, grey wooded and irrigated brown soils.
Field peas	Up to the 6 th trifoliate leaf.	Black and grey wooded soils.
Soybeans (Manitoba only)	1–3 leaf	N/A

¹ Do not use in the last year of seed production.

CROP ROTATIONS:

Research studies have shown the following crops can be safely grown in black and grey wooded soil zones the year following application:

- Alfalfa
- Clearfield[®] canola
- Field peas
- Lentils
- Spring barley
- Spring wheat

There are several factors that effect the re-cropping following an Imidazolinone application. These include in order of importance:

1. **Product:** With imazethapyr for example being more persistent than imazamox.
2. **Soil moisture:** Need > 125 mm (5") of rain between herbicide application and August 31 in the year of application.
3. **Organic matter:** Brown soil zone (< 3% organic matter) are more susceptible to carry over crop injury the year after application.
4. **Rate:** As affected by the crop – soil residues are the issue.
5. **Soil pH:** Persists longer in a pH < 5.5–6.

Depending on the following crop the level of sensitivity will vary. Please contact your local ADAMA ABM for more details.

PRE-HARVEST INTERVALS:

- Dry beans, Soybeans: 100 days
- Field peas: 60 days

GRAZING RESTRICTIONS:

- Do not graze or harvest seedling alfalfa within 14 days of treatment.
- Do not graze or harvest field peas for feed within 30 days of treatment.
- Do not graze other treated crops or cut for feed prior to crop maturity.
