DAVAI® A PLUS

HOW IT WORKS:

DAVAI® A PLUS combines 2 actives to tackle broadleaf and grassy weeds. See DAVAI® 80 SL and ARROW ALL IN® for more information.

CROP STAGING:

Crop	Stage
Dry Beans, Soybeans	Emergence to 3 expanded trifoliate leaves
Field Peas	1-6 true leaf
Imidazolinone- Tolerant Lentils	1-9 node

MIXING INSTRUCTIONS:

- 1. Fill clean tank ½ to ¾ full of clean water and turn agitation on.
- 2. Add the required amount of DAVAI® 80 SL herbicide and continue to agitate.
- 3. Add the required amount of ARROW ALL IN® herbicide and continue to agitate.
- 4. If required, add the correct amount of tank-mix partner while agitating.
- 5. Add the required amount of adjuvant while agitating.
- 6. Continue agitating and fill the remainder of the spray tank with water.

ADJUVANT RATE:

No adjuvant required.

If less than 150 mm of rainfall between time of application and August 31, it is strongly recommended to refrain from growing canola, durum or canary seed the following year. Contact your ADAMA representative for details.

There are several factors that effect the recropping following an imidazolinone application. These include in order of importance:

- 1. Product: With imazethapyr for example being more persistent than imazamox.
- 2. Soil moisture: Need > 125 mm (5") of rain between herbicide application and August 31 in the year of application.
- 3. Organic matter: Brown soil zone (< 3% organic matter) are more susceptible to carry over crop injury the year after application.
- 4. Rate: Depending on the crop and rates, soil residues can be an issue.
- 5. Soil pH: Persists longer in a pH < 5.5 6.

Depending on the following crop the level of sensitivity will vary. Please contact your local ADAMA ABM for more details.

PRE-HARVEST INTERVALS:

• Dry Beans: 75 days

• Field Peas: 60 days

· Imidazolinone-Tolerant Lentils: 60 days
