SAFACYN[®]

Your Harvest. Your Choice.

For years, farmers have had limited choice when it comes to pre-harvest solutions.

Now's there's a new fully serviced option.

SAFACYN[®] is an exclusive SL formulation, backed by patented formulation technology designed for consistent, predictable drydown.

ADAMA

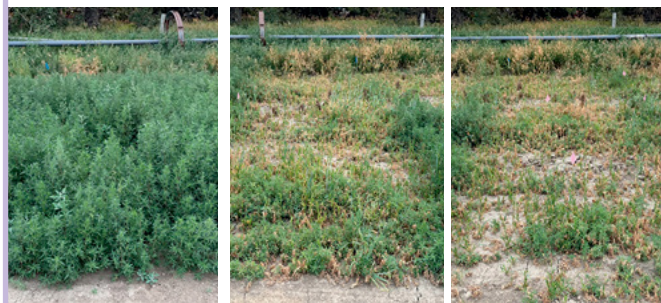

WHAT WE HEARD.

WHY FORMULATION MATTERS.

We listen, learn and work alongside farmers in the field to turn real challenges into innovative solutions, here are some of the biggest complaints we heard about the existing products on the market and how **SAFACYN®**'s improved formulation helps solve them.

I need to know this is a product I can count on, that's been tested locally and across all the different ways I might need to use it.

Even when tested without glyphosate in the tank, you can see the consistent performance of **SAFACYN®**'s unique formulation on its own. The active ingredient is fully dissolved, supporting uniform distribution from the jug, through the spray tank and into each spray droplet, reaching every leaf.

UTC Competitor **SAFACYN®**
14 Days after treatment

I need confidence the product is getting to the plant and working the way it should. I often see inconsistency throughout the field with the product I use now.

SAFACYN® was built with consistent delivery in mind. Designed to support uniform active ingredient availability across the application and on the plant.

Competitor + MSO **SAFACYN®** + MSO
Consistent performance you can see.
At 25 days after treatment, **SAFACYN®** showed greater drydown and less green material on thistles compared to the competitor, with both treatments applied under the same conditions.

I don't have time to fight with my sprayer.

SAFACYN® has been tested for ease of mixing and handling, with an SL formulation the active is dissolved in the solution meaning no suspended solids will settle out of the solution.

SAFACYN® formulation (left, clear)
Competitor formulation (right, milky)

When harvest timing is tight, I need predictable results!

ADAMA has tested **SAFACYN®** for years in both small plot and large-scale farmer lead trials for reliable performance. It's formulation technology is designed to support consistent, predictable drydown when timing matters.

SAFACYN®

When the window opens, be ready.

Harvest doesn't always happen on your schedule. Crop maturity varies. Weed pressure changes. Weather moves.

SAFACYN® gives you:

CONSISTENT CROP + WEED DRYDOWN

Helps move the crop and weeds toward harvest readiness when applied at the appropriate timing.

UNIFORM FIELD FINISH

Helps support a more even finish across the field.

PREDICTABLE HARVEST TIMING

Helps you work toward your intended harvest window when conditions are right.

Flexibility that fits the field.

Flexible adjuvant options and rate flexibility gives you the ability to adapt the program to crop maturity, canopy, weed pressure and environmental conditions.

CASES | BULK

Choose the format that fits your program, acres and application needs.

SAFACYN® (External adjuvant of your choice)

Case: 2 x 7.35 L (160 acres)

Drum: 88.2 L (960 acres)

SAFACYN® RTG

Case: 7.35 L **SAFACYN®** + 8.1 L **ADAMA COC** (80 acres)

A different option beyond harvest.
